

10 GPM Cherokee Basin, KS

Equipment	- 10 GPM Amine Plant - 20" High Pressure Contact Tower - Filter and Overhead Separator
Location	Cherokee Basin, Wilson County, Kansas
Delivery Date	July, 12th 2017

Summary

With a repeat customer in the Cherokee Basin of Kansas, the CO₂ was measured at 1.2%. The operator's goal was to flow at 0.8%. TransTex refurbished, installed and commissioned a 10 GPM Amine Plant, along with a 20" contact tower, filter and overhead separator.

Having provided a plant to this producer earlier in the year and considering the reliability of the unit, TransTex was able to supply this plant with confidence; knowing that it will provide an acceptable gas stream, even with the tight CO₂ standards of the pipeline.
