

12.5 GPM Amine Plant—South Louisiana

Equipment

- 12.5 GPM Amine Plant Regen
- Flash tank

Location South Louisiana

Delivery Date April 24th, 2018

Summary

As gas wells mature, the flow rate decreases and often allows for a smaller amine treating plant. An existing customer with a well in East Louisiana contacted TransTex to downsize from a 30 GPM Amine Plant to a smaller unit. TransTex offered a 12.5 GPM Amine Plant along with installation and demobilization of the existing 30 GPM Amine Plant.

The goal was to keep the downtime to a minimum. TransTex met the challenge, offering a fully skidded unit and installed it with existing pipe, in 3 days.

Downsizing is a win for the customer, offering immediate costs savings in the monthly lease, chemicals, as well as, electrical costs.
