

30 GPM Cherokee Basin, KS

Equipment	<ul style="list-style-type: none"> - 30 GPM Amine Plant - 30" High Pressure Contact Tower - Filter and Overhead Separator
Location	Cherokee Basin, Wilson County, Kansas
Delivery Date	October 20th, 2016

Summary

In a well located in the Cherokee Basin of Kansas, the CO₂ was measured at 1.2%. The operator's goal was to flow at 0.8%. The customer turned to TransTex to replace an existing, oversized Amine plant supplied by a competitor. TransTex refurbished, installed and commissioned a 30 GPM Amine Plant, along with a 30" contact tower with filter and overhead separator

Cost savings were immediately recognized in chemicals, energy consumption and lowering the monthly lease rate.
